~~Bleeding A Harley Se Hydraulic Clutch~~

Hydraulic Clutch Bleeding on a Harley Davidson Touring Bike. Posted on April 22, 2018 by scottridesit. At long last after multiple requests for this maintenance task, it's here! Even better, this is a very easy, inexpensive, and quick task to keep another part of your Harley in top form. Because the hydraulic clutch uses DOT4 brake fluid, it needs to be bled out of the line and replaced at minimum once every 2 years.

~~Bleeding A Harley Se Hydraulic Clutch~~

Brake Bleeding - Harley Davidson Community But you may not need to go to that extreme if you take your time. The main thing is that if you have not bled the brakes since the bike was new (or don't know if it has been done), it is time to COMPLETELY replace the brake fluid in both front and rear brake systems!

~~Bleeding Brakes | Harley Davidson Forums~~

Once you have partially closed the cylinder, you can open the bleed valve at the top, providing an escape for the air that has become trapped inside. Leave this valve open until hydraulic fluid flows from the valve, indicating the air has been fully released.

~~How to Bleed Air from a Single Acting Hydraulic Cylinder~~

Generally speaking, air will work its way out of pretty much any hydraulic system over time. Even trapped air will dissolve into the oil and be transported back to the tank eventually. But this is not to say that bleeding or purging of air is not a good idea to fast track the process.
