Wastewater treatment, also called sewage treatment, the removal of impurities from wastewater, or sewage, before they reach aquifers or natural bodies of water such as rivers, lakes, estuaries, and oceans. Since pure water is not found in nature (i.e., outside chemical laboratories), any distinction between clean water and polluted water depends on the type and concentration of impurities found in the water as well as on its intended use.

Required processes

A set of indicators that incorporate environmental, societal, and economic sustainability were developed and used to investigate the sustainability of different wastewater treatment technologies, for plant capacities of < 5 million gallons per day (MGD) or 18.9×10^3 cubic meters (m^3 / day). The technologies evaluated were mechanical (i.e., activated sludge with secondary treatment), lagoon (facultative, anaerobic, and aerobic), and land treatment systems (e.g., slow rate irrigation ...

Management Of Wastewater Treatment. FM Environmental provides a vast range of treatment options for municipal sewage treatment. The Biosam range of submerged aerated media systems cater for housing and commercial developments with its modular design while Mobile options suit quick-build installations and export markets. The MBR range of treatment systems incorporate advanced membrane technology for higher discharge consent standards and environmentally sensitive applications and ...
