key problem faced by managers is how to allocate scarce resources among activities or projects. Linear programming, or LP, is a method of allocating resources in an optimal way. It is one of the most widely used operations research (OR) tools.

Linear programming problems which involve only two variables can be solved by graphical method. If the problem has three or more variables, the graphical method is impractical.

The major steps involved in this method are as follows

- (i) State the problem mathematically
- (ii) Write all the constraints in the form of

This method is used to solve a two-variable linear program. If you have only two decision variables, you should use the graphical method to

Acces PDF Operations

find the optimal solution.
A graphical method involves formulating a set of linear inequalities subject to the constraints. Then the inequalities are plotted on an X-Y plane.
