Diffusion is the net movement of anything (for example, atoms, ions, molecules, energy) from a region of higher concentration to a region of lower concentration. Diffusion is driven by a gradient in concentration. The concept of diffusion is widely used in many fields, including physics (particle diffusion), chemistry, biology, sociology, economics, and finance (diffusion of people, ideas, and ...

Diffusion - Wikipedia

Diffusion is part of the transport phenomena. Of mass transport mechanisms, molecular diffusion is known as a slower one. Biology. In cell biology, diffusion is a main form of transport for necessary materials such as amino acids within cells. Diffusion of solvents, such as water, through a semipermeable membrane is classified as osmosis..

Computer: This simulation requires an IBM PC, XT, AT, PS/2, Compaq, Tandy 1000, or a computer 100% compatible with one of those models. The machine must have at least 640k of RAM. **Controls:** The simulation is best run with a mouse and keyboard, but may be run entirely from the keyboard. **Display:** The simulation requires a color monitor with an IBM EGA, MCGA, VGA, or Tandy 1000 graphics system.

Tides are the rise and fall of sea levels caused by the combined effects of the gravitational forces exerted by the Moon and the Sun, and the rotation of the Earth.. Tide tables can be used for any given locale to find the predicted times and amplitude (or "tidal range"). The predictions are influenced by many factors including the alignment of the Sun and Moon, the phase and amplitude of the ...

2A.6 One obvious limitation is that the model treats only displacements along the chain, not displacements that take an end away from the chain. (See Fig. 2A.2 in the Student ' s Solutions Manual) (a) The displacement is twice the persistence length, so $x = 2l$, $n = 2$, $f = n/N = 2/200 = 1/100$ and $F =$
